

ELECTRO WAND EW-10

The EW10 is supplied with a clamping earth lead, wand assembly and insert. The insert is located at the end of the wand assembly, the pads/socks are fitted over the insert.

The clamping earth leads applied to the piece of stainless steel that is being worked on. The EW10 is switched on and the pad, loaded with solution is applied to the metal. A few light strokes will ensure that the weld discoloration is removed.

Available for 110VAC and 240 VAC, 60HZ
